

Confirmed Cases of COVID-19 in Hiroshima City (as of 3/30/2021)

\*Note: all data is current as of the dates given.

Patient Numbers	Ages		Hospitalization (Etc)	
	3362-3379 (18)	Less than 10	0	In hospital
Teens		0		
20s		2		
30s		1	At lodging facility	5
40s		3		
50s		3		
60s		2	TBD	13
70s		0		
80s		3		
90s		4		

Note) At this point in time, the number of new infections per 100,000 people this week has reached 5.3, which is more than the warning level standard of 4 (set by Hiroshima Prefecture). Based on epidemiological studies until this point, one of the trends noticed in patients is that because they did not catch COVID-19 during the period of rapid infection increase or during the Intensive COVID-19 Infection Prevention Measures period, their line of thought was "I won't catch COVID-19, I'll be fine." Remember that this is a powerful virus that ANYONE can catch. Take this time to rethink your actions and double-down on your infection prevention measures.
